

CREATING DYNAMIC URLS: RETROFIT

Creating a Dynamic URL

- **PATH** allows replacement of a URL placeholder at runtime
- **Query** allows filtering, searching and sorting data
- Queries are usually put at the end of a URL endpoint

```
interface NewsApiService {  
  
    @GET("api/latestnews/{apiKey}")  
    fun fetchLatestNews(fetchLatesNews  
        @Path("apiKey") apiKey: String = "13drrfrfr45t5t"  
    ): Response<List<News>>  
}
```

```
interface NewsApiService {  
  
    @GET("api/latestnews/{apiKey}")  
    fun fetchLatestNews(fetchLatesNews  
        @Path("apiKey") apiKey: String = "13drrfrfr45t5t",  
        @Query("type") type: String = "sports"  
    ): Response<List<News>>  
}
```

Section Summary

- **PATH** allows replacement of a URL placeholder at runtime
- **Query** allows filtering, searching and sorting data
- Queries are usually put at the end of a URL endpoint
